Chapter 17, Problem 2RQ

Problem

If $f(t) = t$, $0 < t < \pi$, $f(t + n\pi) = f(t)$, the value of $\omega 0$ is

(a) 1

(b) 2

(c) π

(d) 2π

Step-by-step solution

Step 1 of 1

Value of ω_o is calculated as follows

$$T = \pi$$

$$\omega_O = \frac{2\pi}{T} = \frac{2\pi}{\pi} = 2$$

$$\boxed{\omega_O = 2}$$
