

Matlab Assignment #1

Q1) a. Create the following Matrices ($MTX1$ and $MTX2$),

$$MTX1 = \begin{bmatrix} 5 & 0 & -1 \\ 3 & 2 & 1 \\ 9 & -7 & 3 \end{bmatrix}, \quad MTX2 = \begin{bmatrix} 7 & 5 & 8 \\ 3 & 9 & 3 \\ -2 & 2 & 4 \end{bmatrix}$$

- b. Write a code to find maximum and minimum numbers among $MTX1$ and $MTX2$.
- c. Write a code to exchange column#1 of $MTX1$ with column#3 of $MTX2$.
- d. Write a code to exchange row#2 of $MTX1$ with row#3 of $MTX2$.

Q2) Write a MATLAB code to plot the following function:

$$f(t) = \begin{cases} -e^t + 5 & t \geq 0 \\ 3t^2 + 5 & t < 0 \end{cases}$$

where the values of t vary between -9 and 9.

Note the following:

- The reference for the above material is available in Part1.
- Prepare your file in a pdf format and submit before due date.
- The maximum number of students per assignment is two.
- The pdf file should contain your names, Matlab scripts, results, plots, and conclusions.
- Share Matlab scripts among other groups is not allowed.
