

Chapter 1, Problem 30P

Problem

Reliant Energy (the electric company in Houston, Texas) charges customers as follows:

Monthly charge \$6

First 250 kWh @ \$0.02/kWh

All additional kWh @ \$0.07/kWh

If a customer uses 2,436 kWh in one month, how much will Reliant Energy charge?

Step-by-step solution

Step 1 of 2

The electric company charges the consumer as following:

Monthly charges of \$6

First 250 kWh @ \$0.02 / kWh

All additional kWh @ \$0.07 / kWh

Total electricity consumption = 2,436 kWh

Step 2 of 2

Calculate the electricity bill.

Monthly charges = \$6

First 250 kWh @ \$0.02 / kWh = \$5

Remaining 2186 kWh @ \$0.07 / kWh = \$153.02

The total charge = \$164.02

Therefore, the electric company will charge \$164.02.
