

Problem

A zero of the transfer function

$$H(s) = \frac{10(s + 1)}{(s + 2)(s + 3)}$$

is at

- (a) 10
- (b) - 1
- (c) - 2
- (d) - 3

Step-by-step solution

Step 1 of 1

Given the transfer function

$$M(S) = \frac{10(S+1)}{(S+2)(S+3)} \quad - (1)$$

The Zeros of transfer function is given by using numerator, and numerator is equal to Zero,

$$10(S+1) = 0$$

$$\Rightarrow S + 1 = 0$$

$$S = -1.$$

A Zero of the transfer function is equal to -1

There fore answer is (b).
