

Problem

If $F(s) = 1/(s + 2)$, then $f(t)$ is

- (a) $e^{2t}u(t)$
- (b) $e^{-2t}u(t)$
- (c) $u(t - 2)$
- (d) $u(t + 2)$

Step-by-step solution

Step 1 of 1

$$f(t) = L^{-1}F(s) = L^{-1}\left[\frac{1}{s+2}\right] = e^{-2t}u(t)$$
