

Problem

The inverse Laplace transform of

$$\frac{s+2}{(s+2)^2+1}$$

is:

- (a) $e^{-t} \cos 2t$
- (b) $e^{-t} \sin 2t$
- (c) $e^{-2t} \cos t$
- (d) $e^{-2t} \sin 2t$
- (e) none of the above

Step-by-step solution

Step 1 of 1

- (c) $e^{-2t} \cos t$
